

Amendments to the Claims

Please amend independent claims 1, 11, 21, and 29 as indicated below. All claims are listed below, with amended claims so marked. This listing of claims will replace all prior versions, and listings, of claims in the application:

1 1. (Currently Amended) A method comprising:
2 receiving video and enhanced content information including at least one identifier
3 of web content associated with the video information;
4 storing a copy of ~~retrieving~~ said web content associated with the video
5 information to allow arbitrary access thereto after a broadcast of said video information;
6 ~~storing said video information in a random access memory~~ for subsequent
7 playback after said [a] ~~broadcast of said video information;~~ and
8 storing said enhanced content information for subsequent access thereto after
9 said broadcast ~~and said retrieved associated web content for subsequent playback,~~
10 wherein said storing is configured to allow playback to be paused without losing
11 synchronization between said video information and said copy of said ~~associated web~~
12 content.

13 2. (Original) The method of claim 1 further including storing said
14 enhanced content information in a random access memory.

15 3. (Original) The method of claim 2 including storing said video
16 information and said enhanced content information in a hard disk drive.

1 4. (Original) The method of claim 1 including providing a time code to
2 synchronize said video information with said enhanced content information.

3 5. (Original) The method of claim 4 including providing separate packets
4 for video information and the enhanced content information and including a time code in
5 each packet.

6 6. (Original) The method of claim 4 including providing a packet including
7 video information and enhanced content information.

8 7. (Original) The method of claim 1 including deriving a key frame from
9 said enhanced content information.

10 8. (Original) The method of claim 7 including deriving a key frame which
11 enables the enhanced content information to be replayed.

12 9. (Original) The method of claim 8 including storing the contents of a
13 web browser buffer.

14 10. (Original) The method of claim 9 wherein deriving a key frame includes
15 storing a pointer to the stored enhanced content information.

16 11. (Currently Amended) An article comprising a medium for storing
17 instructions that cause a processor-based system to:
18 receive video and enhanced content information including at least one identifier
19 of web content associated with the video information;

1 storing a copy of retrieving said web content associated with the video
2 information to allow arbitrary access thereto after a broadcast of said video information;
3 store said video information ~~in a random access memory~~ for subsequent
4 playback said [a] ~~broadcast of said video information;~~ and
5 store said enhanced content information for subsequent access thereto after said
6 broadcast ~~and said retrieved associated web content for subsequent playback,~~ wherein
7 said storing is configured to allow playback to be paused without losing synchronization
8 between said video information and said associated web content.

9 12. (Original) The article of claim 11 further storing instructions that cause
10 a processor-based system to store said enhanced content information in a random
11 access memory.

12 13. (Original) The article of claim 12 further storing instructions that cause
13 a processor-based system to store said video information and said enhanced content
14 information in a hard disk drive.

15 14. (Original) The article of claim 11 further storing instructions that cause
16 a processor-based system to provide a time code to synchronize said video information
17 with said enhanced content information.

18 15. (Original) The article of claim 14 further storing instructions that cause
19 a processor-based system to provide a separate packet for video information and the
20 enhanced content information and to provide a time code for each packet.

1 16. (Original) The article of claim 14 further storing instructions that cause
2 a processor-based system to provide a packet including video information and
3 enhanced content information.

4 17. (Original) The article of claim 11 further storing instructions that cause
5 a processor-based system to derive a software key frame from said enhanced content
6 information.

7 18. (Original) The article of claim 17 further storing instructions that cause
8 a processor-based system to derive a software key frame which enables enhanced
9 content information to be replayed.

10 19. (Original) The article of claim 18 further storing instructions that cause
11 a processor-based system to store the contents of a web browser buffer.

12 20. (Original) The article of claim 19 further storing instructions that cause
13 a processor-based system to store a pointer to the stored enhanced content
14 information.

15 21. (Currently Amended) A system comprising:
16 a processor; and
17 a random access memory, coupled to said processor, to store at least
18 video information for subsequent playback after a broadcast of said video
19 information, enhanced content including at least one identifier of web content
20 associated with the video information, and a copy of the associated web content for to

1 allow arbitrary access thereto during replay of any portion of the video information and
2 ~~associated local copy of the web content;~~ ;

3 wherein said replay may be paused without losing synchronization between said
4 video information and said associated web content.

5 22. (Original) The system of claim 21 including storage coupled to said
6 processor, said storage storing a program that causes the processor to store video
7 information and enhanced content information for subsequent random access playback.

8 23. (Original) The system of claim 22 wherein said program causes said
9 enhanced content information to be stored as a software key frame.

10 24. (Original) The system of claim 23 wherein said program causes said
11 processor to store the contents of a web browser buffer.

12 25. (Original) The system of claim 23 wherein said program causes a
13 processor to derive a software key frame storing a pointer to the stored enhanced
14 content information.

15 26. (Original) The system of claim 21 wherein said random access
16 memory is a hard disk.

17 27. (Currently Amended) A method comprising:
18 receiving video and enhanced content information to at least identify web content
19 associated with the video information;

1 storing a copy of ~~retrieving~~ the associated web content to allow arbitrary access
2 thereto after a broadcast of said video information;

3 determining a synchronization data between the video content and the
4 associated web content; and

5 storing the video information, the associated web content, and the determined
6 synchronization data for subsequent synchronized playback after a broadcast of the
7 video information of the video information and the associated web content, wherein said
8 storing is configured to allow playback to be paused without losing synchronization
9 between said video information and said associated web content.

10 28. (Previously Presented) The method of claim 27, wherein determining
11 the synchronization comprises providing a time code to synchronize said video
12 information with said associated web content.

13 29. (Currently Amended) An apparatus comprising a machine accessible
14 medium having associated data, which when accessed, results in a machine
15 performing:

16 receiving video and enhanced content information to at least identify web content
17 associated with the video information;

18 storing a copy of ~~retrieving~~ the associated web content to allow arbitrary access
19 thereto after a broadcast of said video information;

20 determining a synchronization data between the video content and the
21 associated web content; and

1 storing the video information, the associated web content, and the determined
2 synchronization data for subsequent synchronized playback after a broadcast of the
3 video information of the video information and the associated web content, wherein said
4 storing is configured to allow playback to be paused without losing synchronization
5 between said video information and said associated web content.

6 30. (Previously Presented) The apparatus of claim 29, wherein the
7 associated data for determining the synchronization further includes data, which when
8 accessed, results in the machine performing:

9 providing a time code to synchronize said video information with said associated
10 web content.
